TABLE OF CONTENTS

	Page
Revisions	iii
Note to Reader	iii
Introduction	1
Wasteload Allocations	1
Assumptions	3
Wasteload Allocation Procedures	7
A. Conventional Pollutants	7
B. Toxic Parameters	11
C. Ammonia Nitrogen	13
D. Total Residual Chlorine	16
E. Bacteria	29
F. Total Dissolved Solids	40
G. General Criteria for Streams	42
Flow Variable Ammonia Limitations Procedures	48
Mixing Zone Procedures	50
Thermal Dischargers	53
Permit Derivation Procedure	54
Segment Analysis Methodology	56
Theory and Methodology	56
Modeling Theory	56
Modified Iowa Model	58
1. Dissolved Oxygen Deficit Equation	59
2. Respiration and Photosynthesis Equation	61
3. Algal Uptake of Ammonia Equation	62
4. Rate Constant Determination	63
5. Temperature Corrections	65
6. Stream Velocity Calculations	66
7. Computer Input and Output Data	69

Appendix A	A-1
Appendix B	B-1
Appendix C	C-1

Revised June 16, 2004

REVISIONS

The following is a brief description of the significant change made to Chapter IV. Revisions to Chapter 61, Water Quality Standards (effective 6/16/04) prompted one major change to Chapter IV: Total Dissolved Solids (TDS) numerical criteria will be determined by applying a site specific approach for the protection of Iowa's surface waters and their specified uses. The site-specific requirements to demonstrate compliance with the narrative criteria and defined uses noted in the Water Quality Standards are included in Section F, Total Dissolved Solids, pages 41-42.

NOTE TO READER

To assist the reader, it is noted that a corresponding diagram directly follows the calculation examples on pages 7-47 in the Wasteload Allocation Procedures section.
